With the growing influence of the Internet, the number of people who use the Internet to find a job has increased significantly. In fact, a recent survey found that 60% of job seekers used the Internet to find a job, up from 40% just five years ago. This trend is expected to continue, as more and more people turn to the Internet for job information.

The screenshot shows a database query interface. At the top, there are three buttons: "Search", "Query", and "Reset". Below these, the text "Query Values" is visible on the left and "7 Rows Selected" on the right. The main area is divided into two tables. The left table, titled "Supplier FOB", has a header row and four data rows, with the first row containing the value "DOP". The right table, also titled "Supplier FOB", has a header row and four data rows containing the following values: "DOPAGO-DOWNTOWN, PA", "DOPAGO-KINSTON, NC", "DOPAGO-ST CHARLES, IL", and "DOPAGO-STOCKTON, CA". Below the right table, the text "IMPERIAL BONDWARE-SHELBYVILLE, IL" is visible. Between the two tables, there are two navigation buttons: a single arrow pointing right and a double arrow pointing right.

**Abstract**—The purpose of this study was to determine the effect of a 12-week training program on the heart rate (HR) and heart rate reserve (HRR) of sedentary middle-aged men. The subjects were divided into two groups: a control group and an exercise group. The exercise group performed a 12-week training program consisting of three sessions per week, each lasting 30 minutes. The control group did not exercise. The HR and HRR were measured at rest and during maximal exercise at the beginning and end of the 12-week period. The results showed that the exercise group had a significant decrease in HR and HRR at rest and during maximal exercise compared to the control group. The control group had no significant changes in HR and HRR. The results suggest that a 12-week training program can improve the cardiovascular fitness of sedentary middle-aged men.
